

Fresh water is limited. We are working to find ways to reuse it.

My name is \_\_\_\_\_.

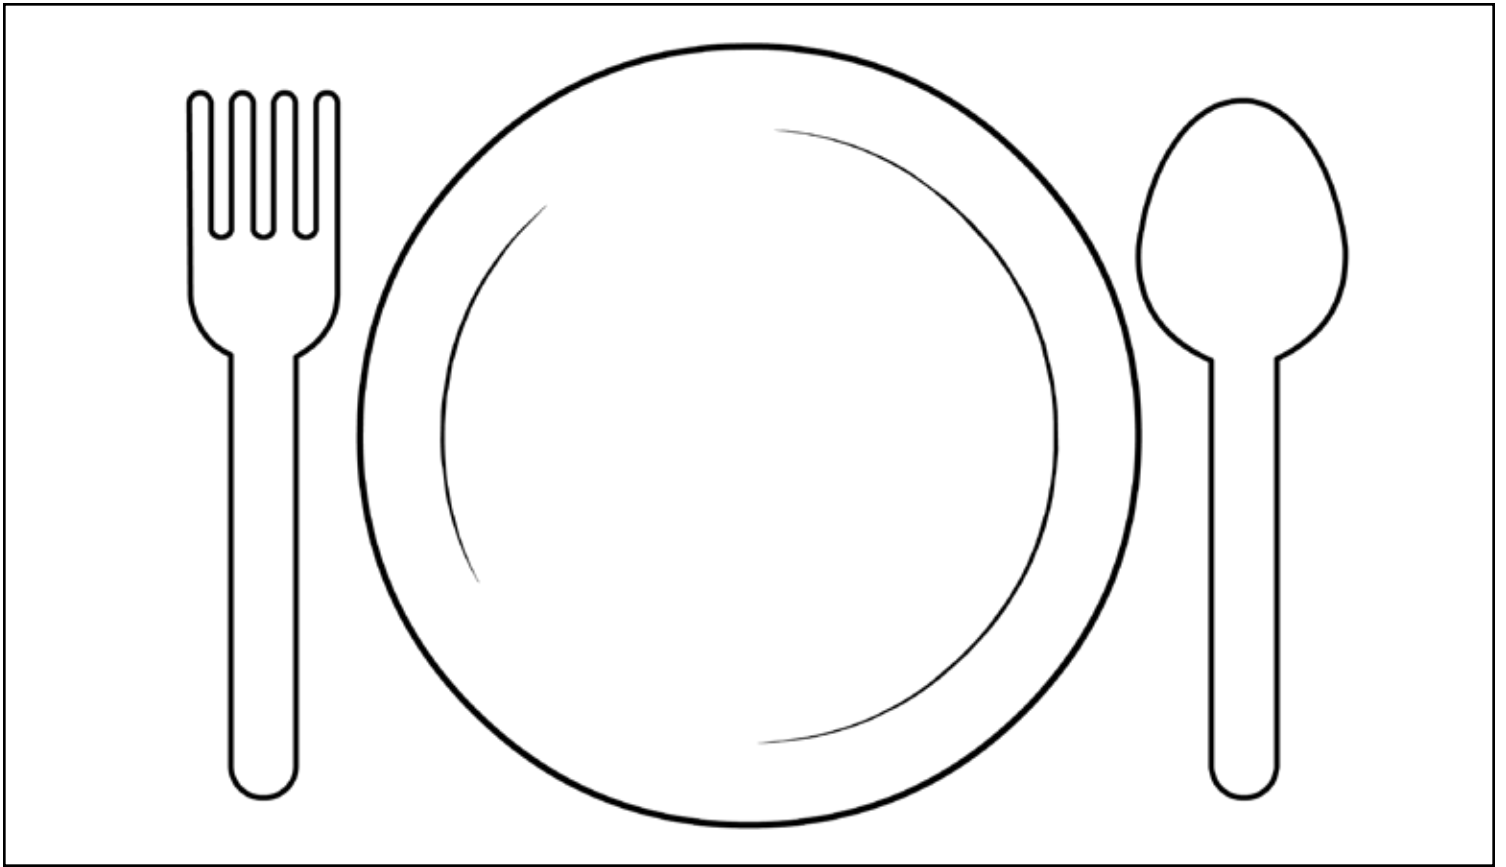

Here is a drawing of me enjoying water.

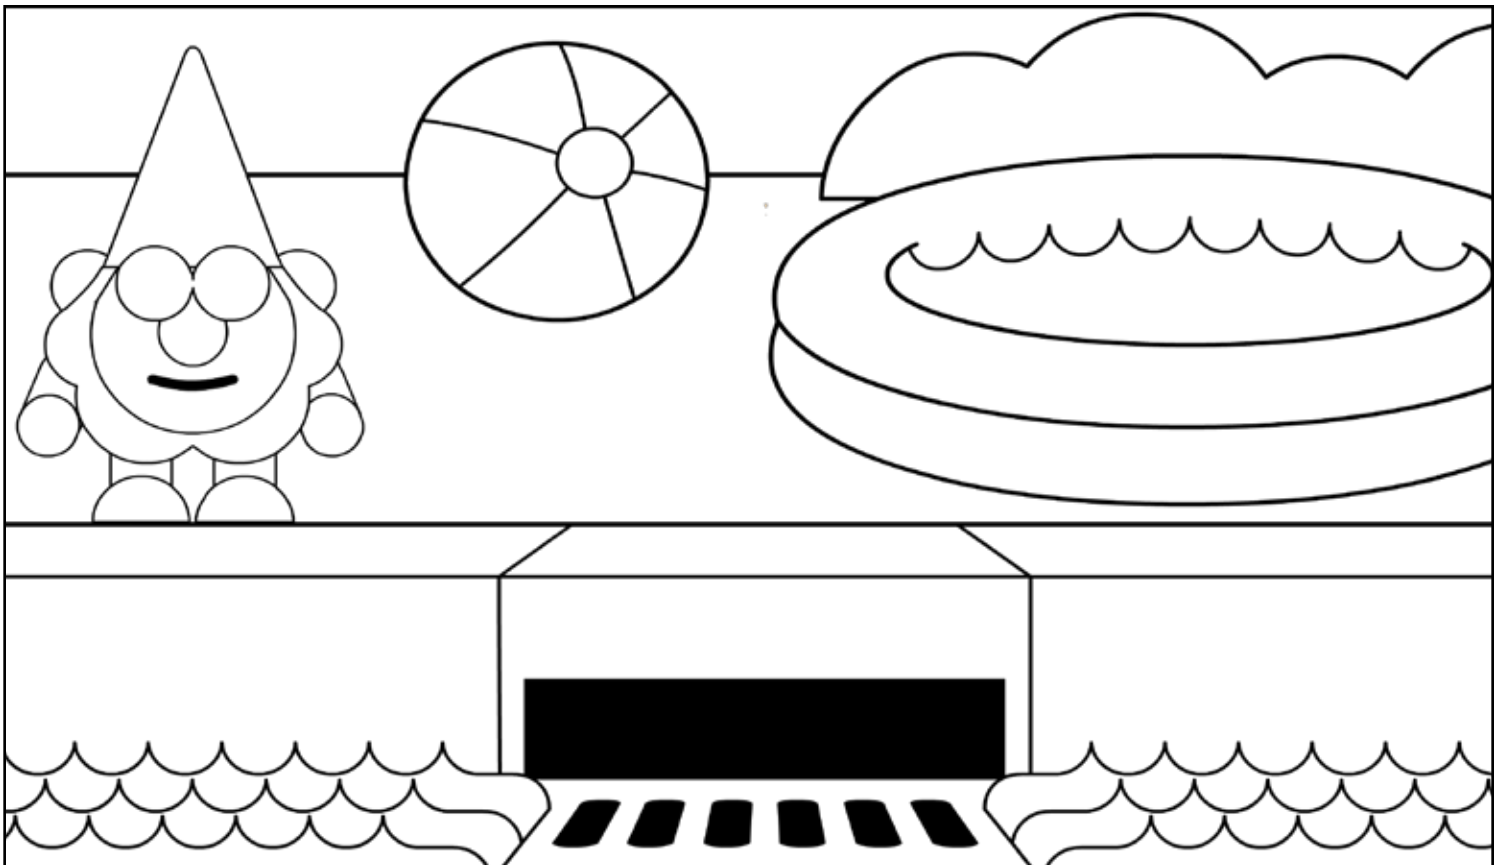

All creatures and plants need water.

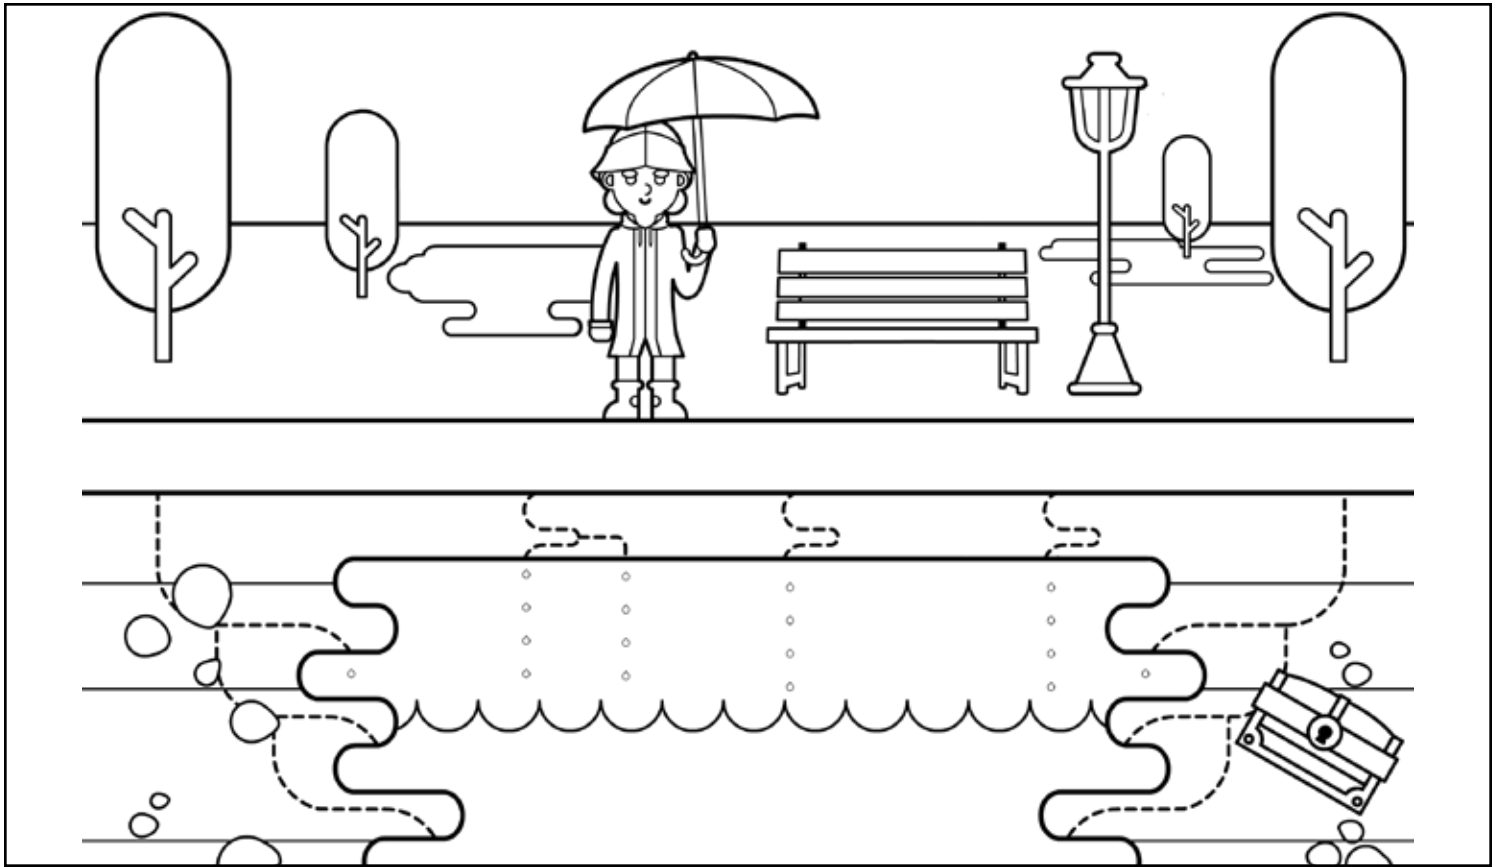

We use water to grow our food.

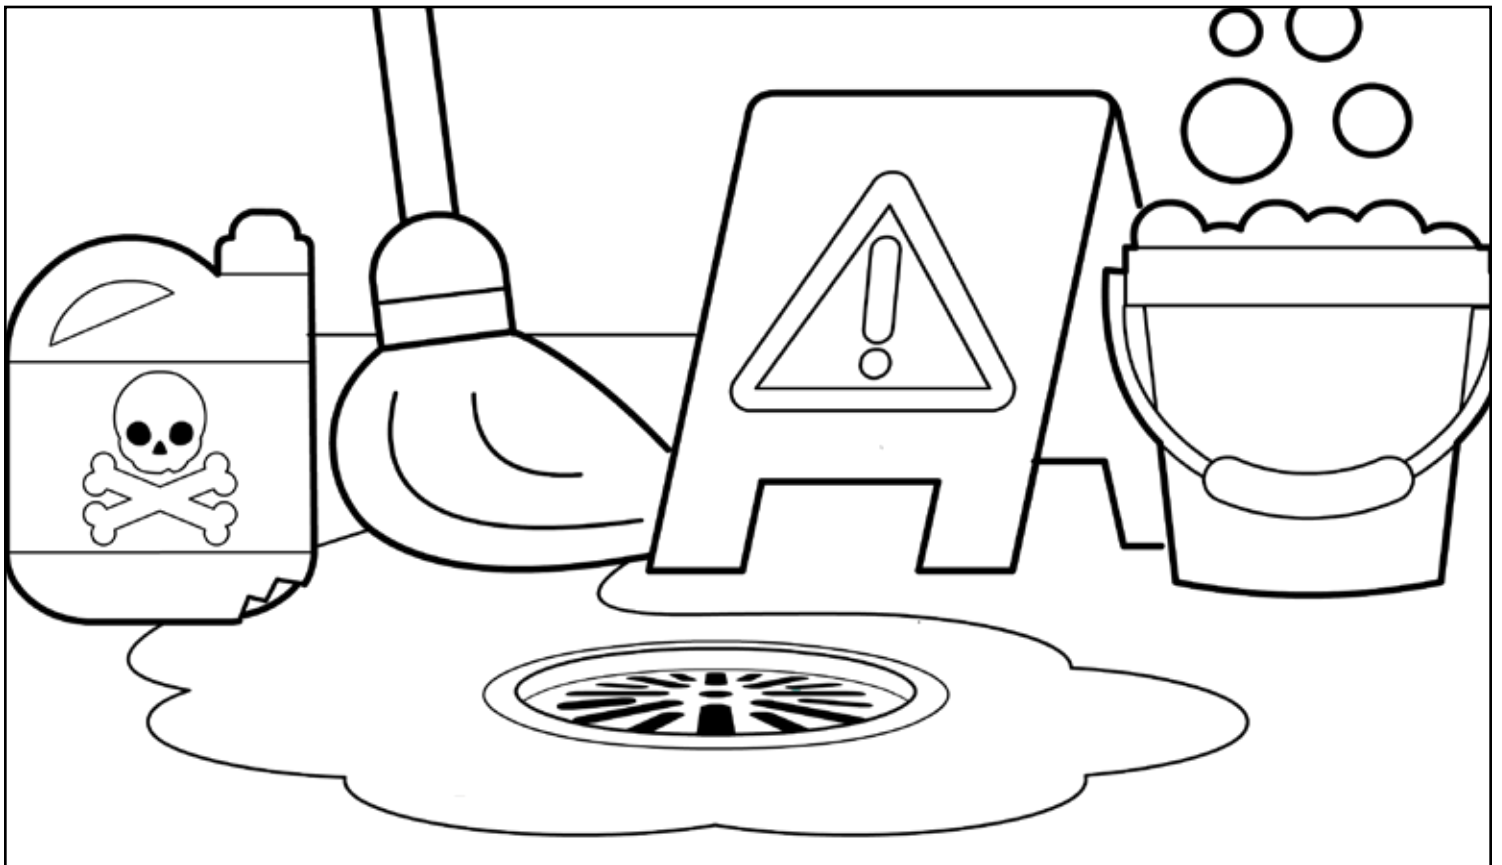

Here is a drawing of my favorite fruit or veggie.

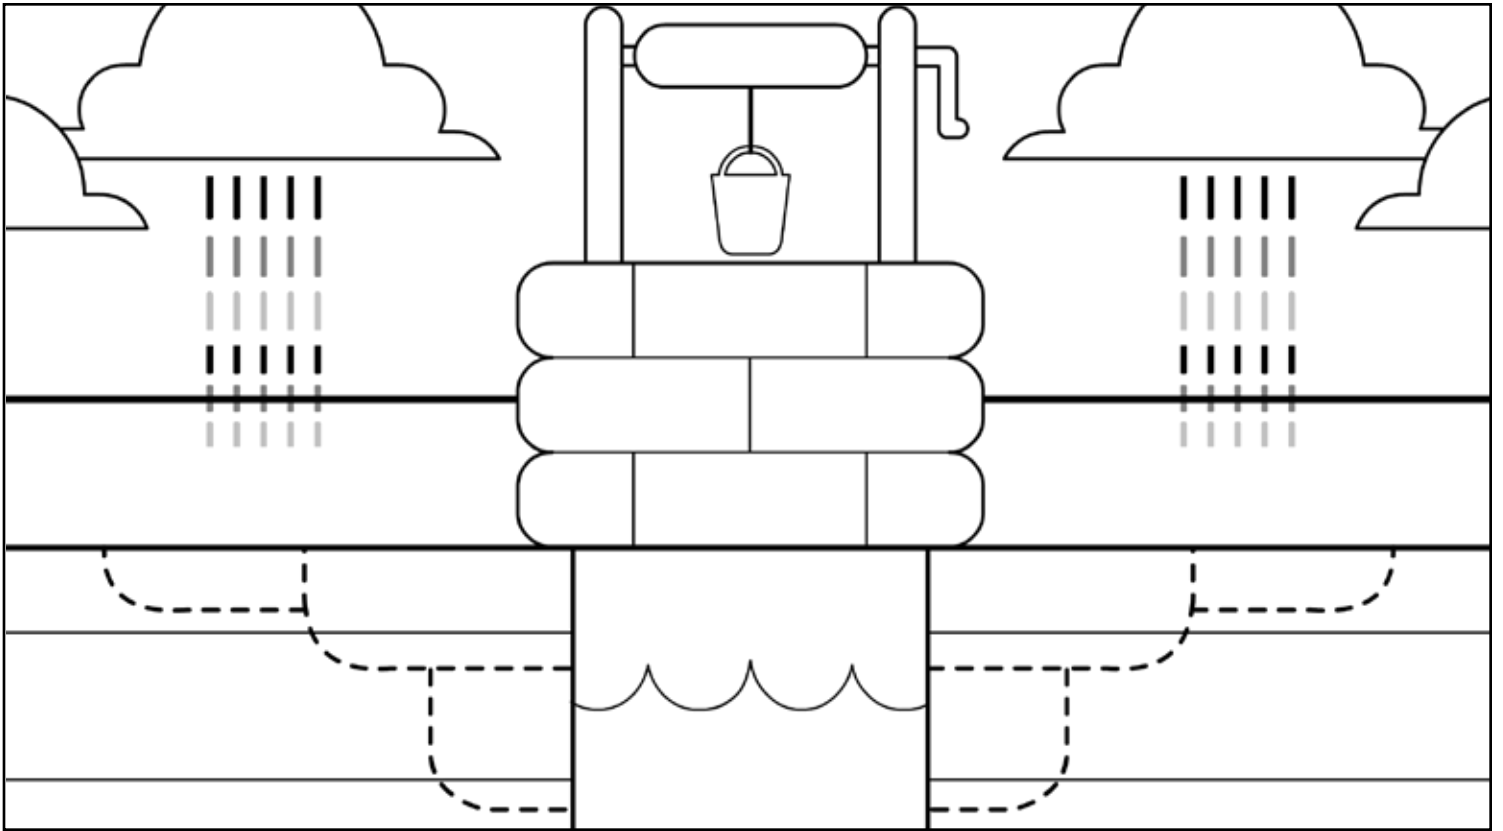

We often see water above the ground.

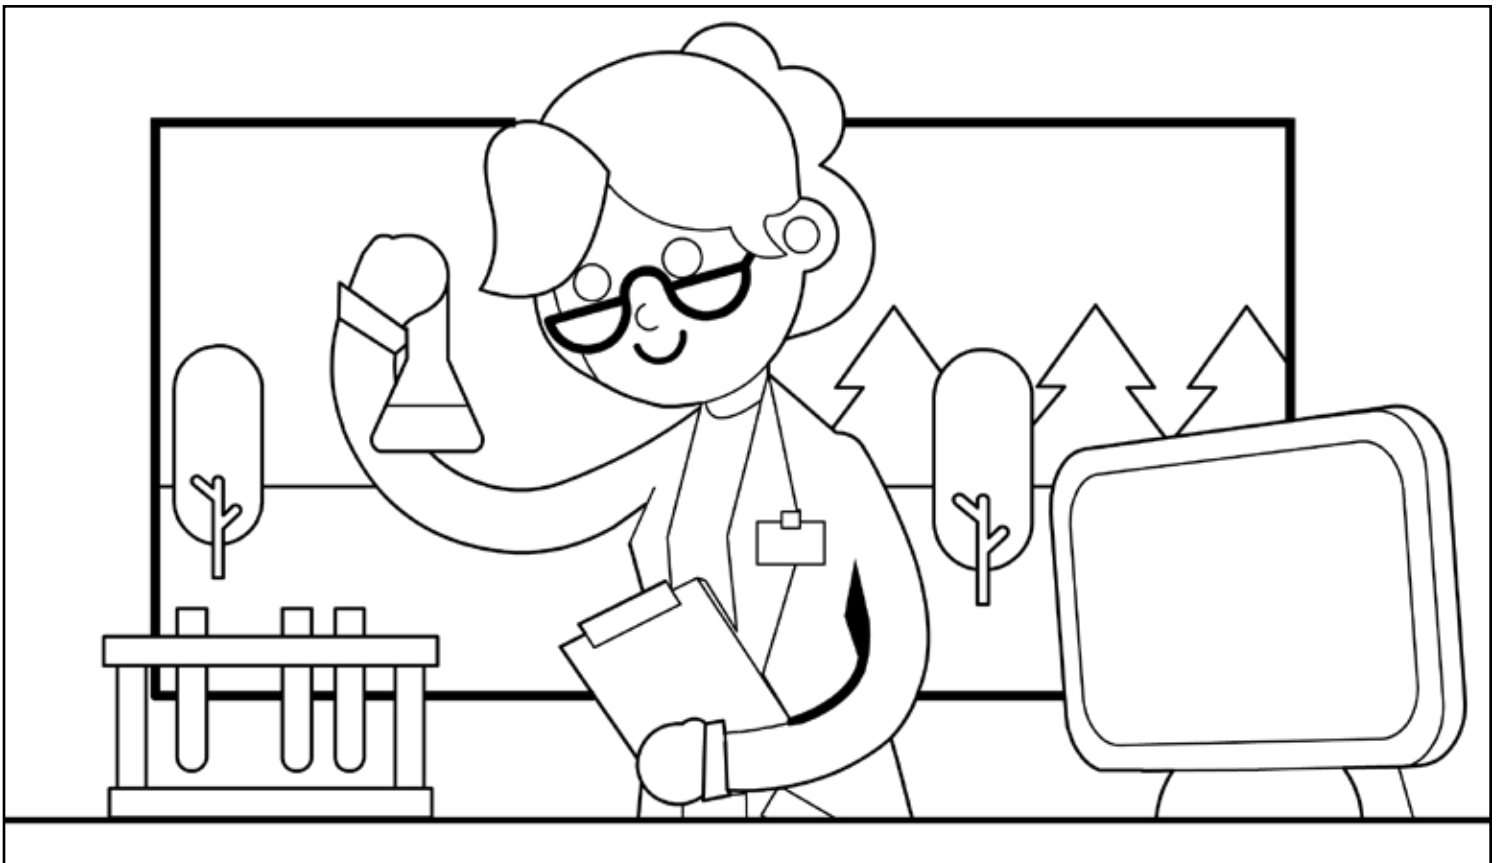

But did you know there is also water below the ground?

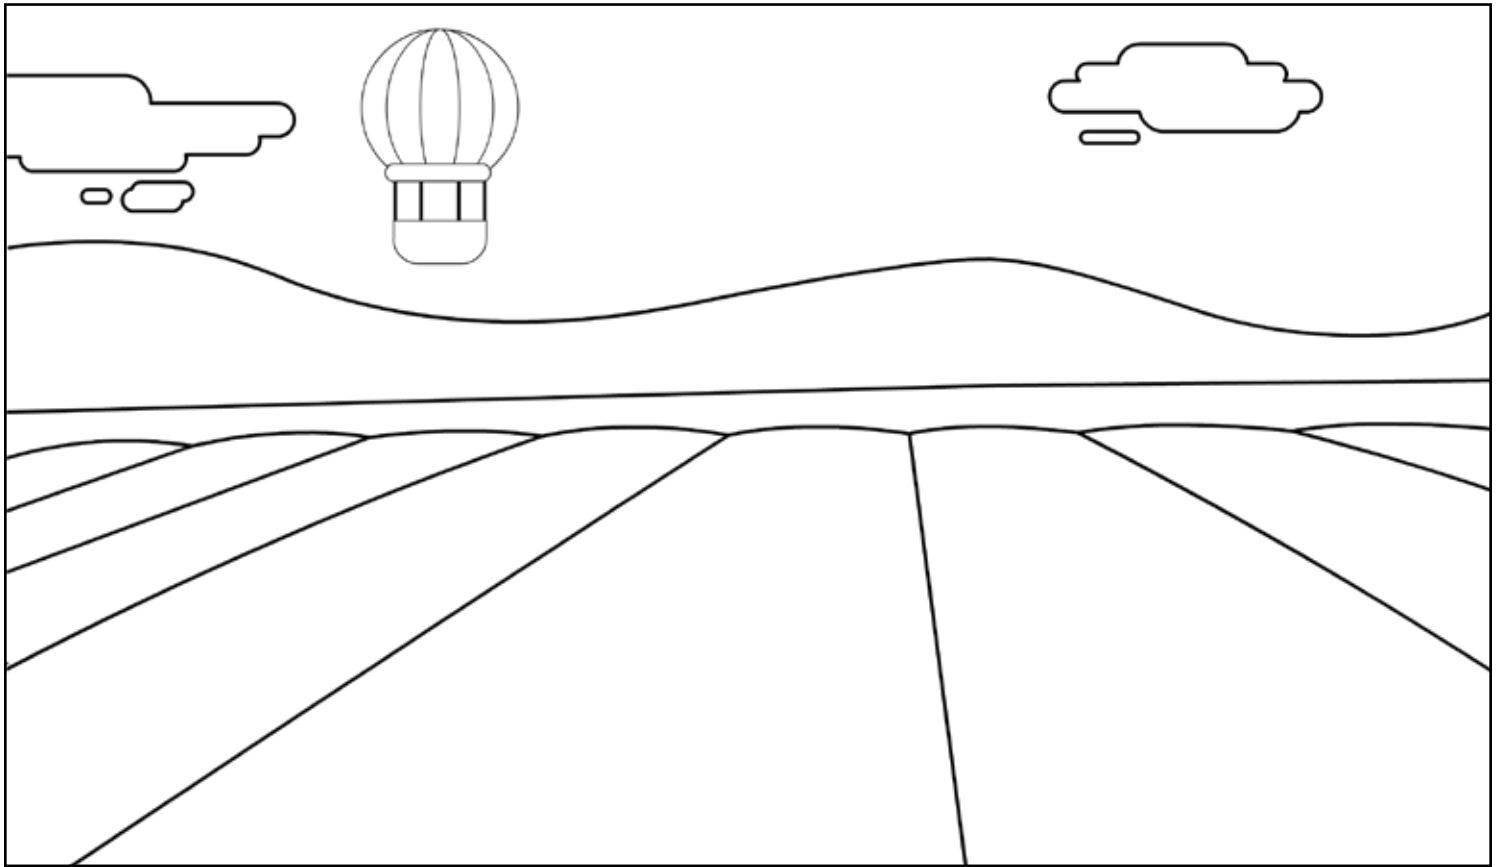

Water gets dirty in many ways.

Water is cleaned by seeping through the ground or by evaporating into the sky and returning as rain.

Scientists are working to find new ways to conserve water by cleaning and reusing it.

Here is my drawing of fruits and veggies in a garden. They need water to grow.
